

# Reduce your Fluorescent Lighting Bills by 30 - 40%

## What It Does

Light Eco Plus is a microprocessor controller, which helps save energy in the operation of conventional inefficient lighting. Our product makes fluorescent T12 / T8 tubes as efficient as the new T5. This world leading technology has a proven track record, with currently over 70,000 installations worldwide.

## How It Works

T12/T8 lights take a lot of energy to start up but after a few minutes that excess power is no longer required. Our system automatically switches to an economy mode allowing the tubes to run more efficiently.

## Installation

The Light Eco Plus unit itself is about the size of a shoe box that can be retrofitted with minimal disruption to any lighting system in about 30 minutes. On installation a minimum of 25% savings are guaranteed, with savings up to 50% being achieved in some instances.

## Applications

The light Eco Plus is ideal for office spaces, warehouses, hospitals, retail outlets and especially under ground car parks, along with many other applications. The system even shows you how much you're saving on its LCD display.

To find out more about controlling your lighting with Light Eco Plus contact SES Ltd on:

Tel: **(065) 6895280** • E-mail: **info@smartenergysystems.ie**

Website: **www.smartenergysystems.ie**

## Capability

Models from 2.4 to 4.8 KVA are standard. Larger models are also available.

## Payback

100% return on investment is typically attained within 18 to 24 months. The unit also has a 3 year warranty. Once Light Eco® Plus is installed there are no maintenance costs and no other ongoing costs only ongoing savings!

## Tax Incentive

The Light Eco Plus product has been approved as eligible under the SEI Accelerated Capital Allowance scheme (ACA). The ACA offers an attractive incentive whereby it allows companies to write off 100% of the purchase value of energy efficient equipment against their profit in the year of purchase.

## TESTIMONIALS

*“A Light Eco Plus installation has achieved 32% reduction in our lighting energy costs.”*

- John Daly, EBS

*“Following initial trials Alan Caren & Partners have installed Light Eco plus lighting control units at several client sites with an average reduction in lighting cost of in excess of 38%, and on this basis we are looking at a nationwide roll-out across our management portfolio.”*

- Shane Mullin,  
Alan Caren & Partners
