

# Do you know how much water you are using per day?

SES Ltd can help you measure your flow; We have a comprehensive range of data logging systems for use in a wide variety of water industry applications. We can help you monitor your flow rate over a period of time, while also checking for fluctuations in your consumption. The biggest problem for a lot of businesses in Ireland, is they are not aware of there water consumption until the bill arrives. We are here to eliminate this problem.

Along with measuring the flow of water or waste water in any pipe or channel with data logging facilities. SES also specializes in custom designing a flow measurement system to cater for any situation.

We also offer a leak alarm system if required, this ensures that when the flow rate goes beyond these points, it will activate an alarm. If required we can also activate a sensor to close the valve and stop the water supply to the building completely.

## SES Water Monitoring System

  
**SmartEnergySystems Ltd.**  
water, energy, environment      save everyday.

# Investigate your Water Leaks before its too late!

Water Leaks are costing organizations and companies thousands of euros per year. SES Ltd provide an experienced leak detecting service to its customers throughout Ireland.

Our team will carry out a detailed survey of your pipping for leaks and suspected leaks before recommending remedies, while also liaising with water providers on the repairs required.

SES Ltd utilizes all the latest methods of detection in order to provide a complete solution to their customer's leaks. The Multi-point correlation system for leak location is the latest and most advanced equipment used in leak detection.

SES Ltd has recently upgraded to this state-of-the-art digital correlation logging system for determining the location of leaks in buried water pipes. The system combines noise logging and noise correlation into one operation to provide improved operational efficiency.

## Some of the advantages of this equipment are as follows:

- **Leak detection and location in one operation**
- **Optimum performance in difficult leak detection situations**
- **Avoids costly night-time working**
- **Three sound samples separate genuine usage from leakage**
- **Latest 24-bit technology**
- **Finds multiple leaks**
- **Powerful analysis software**

We offer a free consultation to all our customers and can help them with investigating any leaks in almost all locations.
