

Fuji Water Leak Detector (HG-10All)

This is the High Performance acoustic leak detector.

It has been 10 years since the HG-10All went on sale and this has built a solid reputation due to useful hand-switch and light weight sensor. It allows accurate pinpointing of the actual leak.

- The maximum point sounded on the ground surface indicates the leak existed right under the ground as shown by the figure.
- Read the maximum METER deflection by listening to the maximum sound through the Headphones so as to determine the point of leak from the ground surface.
